TASK LIST

**Completion  
Certificate**

**Recommendation  
Letter**

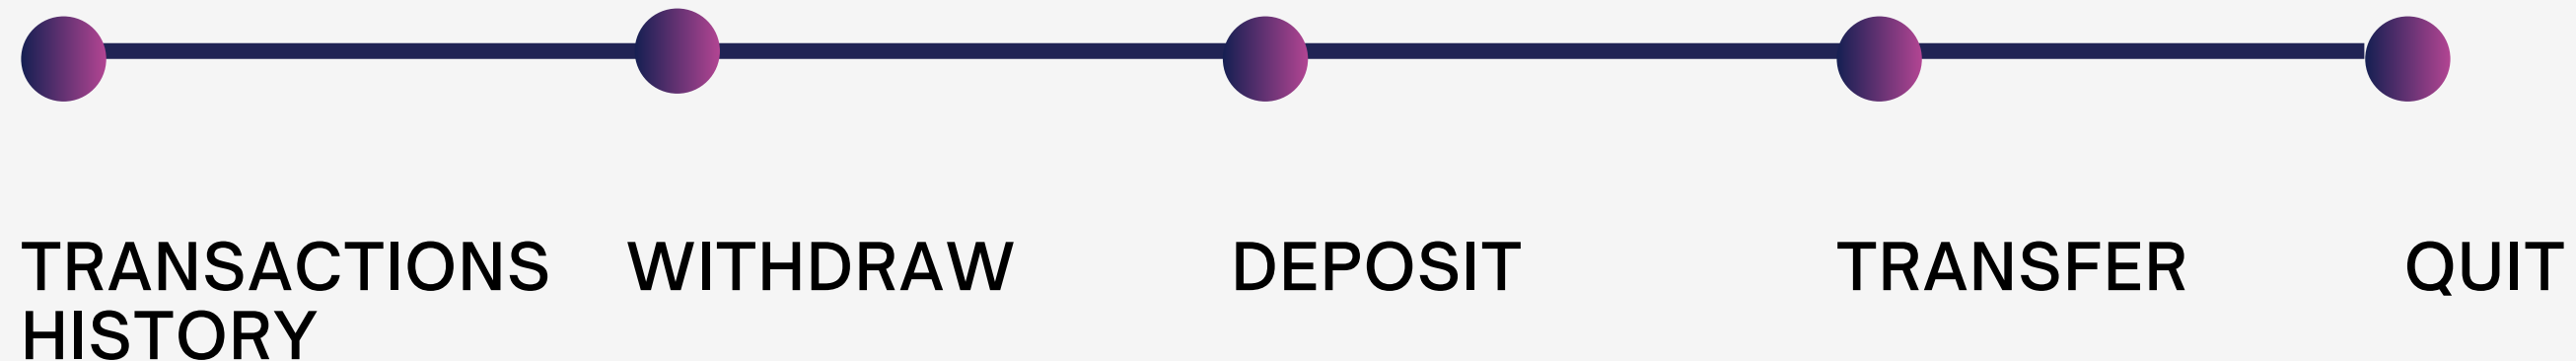

**Placement  
Support**

# TASK

## ATM INTERFACE

The ATMs in our cities are built on Python, as we have all seen them. It is a console-based application with five different classes. In order to use the system, the user must enter his or her user ID and pin when it starts. Once the details are entered successfully, ATM functionality is unlocked. As a result of the project, the following operations can be performed:

A TASK SUBMISSION FORM WILL BE SHARED
